

# AlphaCloud

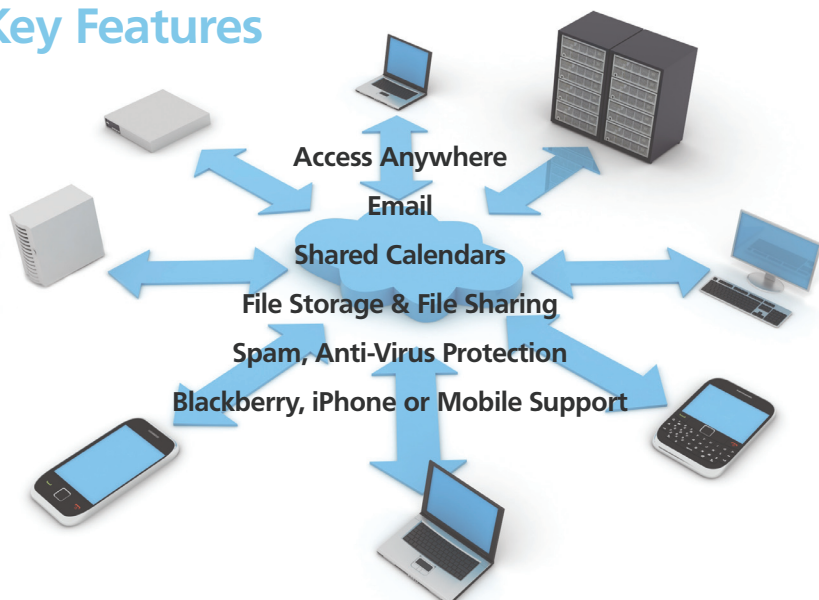

## Hosted Applications Always Available, From Anywhere

Alpha CC's **AlphaCloud** Apps service converts all your existing Windows applications (Everything from ERP and accounts, to email and office productivity tools).

Instead of the current method of purchasing software applications, locally installed on a server, your applications are now instantly secure and available, 24 hours a day, from any location via the internet. With no upfront software application cost, you simply pay a monthly fee per application, per user.

Alpha CC takes care of the underlying infrastructure and the day to day housekeeping (Administering user accounts, e-mail addresses and spam filters) allowing you to manage your I.T. cost on a per user basis.

### Key Features

*" The AlphaCloud hosted application approach made a lot more sense than installing applications locally and having to worry about keeping them secure and safe." To be able to view and work on your data from any location with the very same look and feel was very attractive to us.*

**Frank Dowling, Managing Director,  
Aviation Corporate Services Limited**

## Benefits

### Cost Effective

By using Alpha CC's **AlphaCloud** on your local applications, you can reduce, if not eliminate your capital expenditure plans.

### Green I.T.

By removing the requirement for servers locally, you can significantly reduce your companies I.T. carbon footprint and save on power costs at the same time.

### High Performance

By leveraging virtualisation technology and thin client solutions, Alpha CC can deliver your applications to users, even over low bandwidth connections.

### Scalable

The **AlphaCloud** service changes as your business changes. If staff numbers are expanding or contracting, you only pay for what you use.

### Managed Service

The **AlphaCloud** environment is constantly monitored 24/7 and proactively managed. All security, patching and upgrades are taken care of as part of the service.
